EMS, a Datalogic Group Company, is the field-proven leader in the development and application of Radio Frequency Identification (RFID) Tags/Labels/PCBs, Antennas, Controllers and network interface modules for tough industrial environments. With over a dozen years of RFID successes in the automotive, electronics, material handling and food processing industries, EMS has built a global reputation in providing customers with complete supply chain solutions – from production to retail EMS has the complete solution!

Technical Description

The HS500-Series Antennas connected to an Escort Memory Systems' Controller provides a very convenient interface between a host computer or programmable Controller and the data in EMS Tags.

The HS500 Antenna contains all the circuitry necessary to convert the digital signals received from the Controller to high-speed RF signals for the Tags, and subsequently, convert the RF signals from the Tags back into digital signals for the Controller.

The compact size and long-range of the Antenna makes it ideal for use in factory automation environments where space is at a premium. For greater mounting flexibility, the HS500 is available in both end-emitting and

face-emitting versions. To further ease installation, the distance from the Controller card to the Antenna can be up to 4,000 feet. This is advantageous because the Controller portion of the RFID system is then afforded extra protection from noise that could be generated by electrical equipment positioned near the Read/Write station. Connection to the Controller is via a quick disconnect circular connector. Antennas can be replaced on the line without changing any wiring.

The Antenna is equipped with a two-color status LED, indicating when power is present and the Antenna is or is not transmitting.

The Antenna is a solid state device, without moving parts or mechanical switches, and configuration is not required prior to installation. It has a metal backplate which helps to distribute stress from the mounting bolts and greatly increases immunity to additional metal in the Read/Write field.
