Designed to operate in harsh, industrial environments, EMS has created high performance, modular RFID products including the HF, LRP, HS, HL and HMS families for the factory integrator and enduser. EMS is known within the industry for products that support virtually every industrial communication protocol making them ideal for integrators and endusers facing real life scenarios.

The HF-0405 RFID Controller from EMS provides cost effective RFID data collection solutions for demanding process control, material handling and automation applications. Escort Memory Systems' built-in error checking routines ensure that the Controller receives tag data correctly even in environments of heavy RF interference. The controller features 8 LED status indicator lights for Power, Communication, RF Activity, and Network Address.
